

HIGHBIRCH ENQUIRER

September 2017

"I was trying to make pizza with the melting beads and then I ended up making something else." Dylana Gr. 5

This was an open-ended activity for the children to participate in. They created what they wanted with minimal direction. This promoted creativity and self-esteem.

Inquiry for the month

This month we decorated a bowl with smarties inside and added water. Then we observed the colours to see what would happen and then we froze it. The outcome came out like an archeological bone.

Here the children were seen enjoying this activity to see what would happen with the smarties. "I learned when you mix water and smarties together, you can see some of the colours on the smarties but mostly you see the chocolate. After we froze it it looked like bones."
