Learning Experience: Building with snow

Children enjoy playing with snow, during outdoor time. They come up with different ideas to play such as snowball making, and building snowman. Building snow shelter is one of the ideas they come up with. They work together to make snow blocks and transporting them to their destination.

“We will need so many blocks to finish this.” – S1.

“The snow is soft, this makes it easy to fill the buckets.” – S2.

“This is a lot of work, we need a bigger shovel.” – S3.

The children were engaged with this learning experience by initiating and delegating tasks for each other to complete. They showed good belonging by working as a team to accomplish the tasks.

Learning Experience: Creating a scene with matchsticks

In this activity, we asked the children what they remember the most from their winter break or what they look forward towards the most from back school. Children then used their creativity to create a scene with matchsticks. One child used matchsticks to make a boat, and he asked the teacher for cotton balls to clouds to his scene.

“I am driving the boat, I am going to lake and fish there in the summer.” –

Another child decided to recreate his building from Minecraft, which he has been building during the break at home.

“This is my house from Minecraft, here is the door, the living room, backyard, and bedroom. The one in Minecraft have more rooms, there is not enough room on this paper.” – S2.

Through this activity, the children were able to express their thoughts through art. It was great to hear from the children about their winter break and what their future outlooks are. Their positivity are always on display.
